

The Heat is on!

There are a few things that will affect the temperature in your unit:

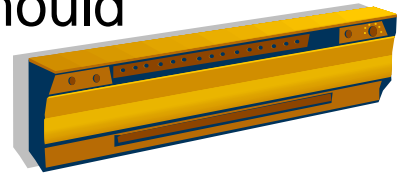

1

If the outside temperature is 60 degrees or above, the boilers will not run.

2

Your heat dial should range from 1 to 5, with 5 being the warmest. They should turn counter clockwise.

3

Large furniture or other items too close to the registers will prevent them from heating properly.

4

All windows should be closed when the boilers are running (below 60). This includes both the storm and the sash windows and patio door.

5

Cover the A/C from inside the unit.

If all of the above items are followed and the temperature in your unit is still not warm enough or if your unit is too warm, please call the office at 952-935-9565.

Thank you!
